

Change of date code branding in Mylar tapes

Semperflex Hydraulic Hoses

Herewith we would like to inform you about the change of our date code branding of Semperflex hydraulic hoses.

In the future the date code (quarter and year “xQxx”) will be implemented as inkjet code in addition to the inkjet production batch code on the opposite side of the branding lay line. Therefore, the existing date code (quarter and year) will be removed step by step from all Mylar tape brandings. This will affect Semperit standard as well as customer branded hose types.

Inkjet and embossed branding lay lines remain unchanged but will include also the new adapted inkjet production batch code displaying the quarter and year. This new date code branding meets all hose standard requirements and has already become standard in today’s market.

With this measure we ensure a consistent traceability of the hose production date!

Please find an example below:

Old:

Mylar Tape:

SEMPERIT  DIN EN 856 4SP DN 12 SAE100 R9R 1/2" WP 425 BAR . Q . . 

Inkjet Code example: 023 Z2 23 26 53 XE

New:

SEMPERIT  DIN EN 856 4SP DN 12 SAE100 R9R 1/2" WP 425 BAR 

Inkjet Code example: **2Q22** 023 Z2 23 26 53 XE

We kindly ask you to take note of this change and we will implement the changeover as of July 1, 2022 (for existing and new orders). The period until the complete conversion of all orders will last until 4Q22.

Existing order confirmations remain unchanged.

With kind regards,
Semperflex Hydraulics
