Semperflex HYDRAULIC informs

SEMPERIT HOSE WIKI – the new digital information platform

Newly implemented on the FLEXLINE 5000 and FLEXLINE 6000

In view of the growing importance of digitization for our industry, Semperit has introduced now the Premium Spiral hose types **FLEXLINE 5000** and **FLEXLINE 6000** to our digital platform called **Hose Wiki** to provide a full product information transfer to our Semperflex customers and their end users.

Semperit FLEXLINE 5000 and 6000 hose types are now marked with a **QR code** that links directly to the new **HOSE WIKI APP**. The user can obtain essential information such as the **product data sheet**, **crimping recommendations, supporting documents, safety instruction and contact information** and some other features.

The QR code can be scanned directly from the hose by any mobile device and thus offers **quick and easy access** for all hose users. No additional download is required, as the web application is opened automatically.

Stay tuned for further notifications about our developments or contact our expert team for more information.

Your Benefits

All relevant product documents directly connected to the Semperit hose

Full information transfer to Semperflex customers and their end users

Easy accessibility to important application instructions for all users

Direct Semperit application support per phone or e-mail
